

MTI offers two tile flange options to simplify installation and ensure a watertight installation between the tub deck and the surrounding wall area:

- Factory Installed Tile Flange
- Integral Tile Flange

Both tile flange options are available on most rectangular and corner tubs. When adding a tile flange to a tub, please specify the side or sides on which the tile flange is to be installed.

Factory Installed Tile Flange

The Factory Installed Tile Flange is ABS tile flange chemically bonded to the tub at the factory. This not only facilitates installation but also provides a watertight seal on any sides specified. Available on square, rectangular and corner tubs.

Tile Flange - Rigid ABS

Factory-Installed Rectangular Tubs

1 Side (MBTFK1)

2 Sides (MBTFK2)

3 Sides (MBTFK3)

Factory-Installed Corner Tubs - 2 sides (MBTFKC)

Integral Tile Flange

The integral tile flange is a ~3/4" acrylic flange molded into the tub at the factory and is available **only** in a 3-sided flange for a rectangular tub and 2-sided flange for a corner tub. The tile flange is designed to screw to the stud wall and must be pre-drilled at the job site. Backer board will rest on top of the flange to provide an even surface for the tile.

NOTE: Integral Tile Flange is not available on all tubs. See specific tub's specification / price sheet for availability.

Integral Tile Flange

3 Sides Rectangular or 2 Sides Corner (MBITF)
